

write error: Disk quota exceeded

Problem

I am getting the error "*write error: Disk quota exceeded*" when trying to run calculations.

Solution

This error indicates that the storage quota assigned to your group has been exhausted.

1. Check that it really is like this using the command ***quota***:

```
$ quota

+-----+
|          CSUC HPC Service:  quota          |
+-----+
| Disk space in use by group members          13.915 GiB |
| Disk quota allocated to group XXXXXX        200.000 GiB |
| Percentage currently in use                  6.00% |
+-----+
```

2. ***Check here*** the amount of data that is allowed for each working directory.
 - a. Remove data as needed if it is necessary.
 - b. If you have free space available, ***contact support team*** asking for help.
